

Last Updated: September 03, 2020

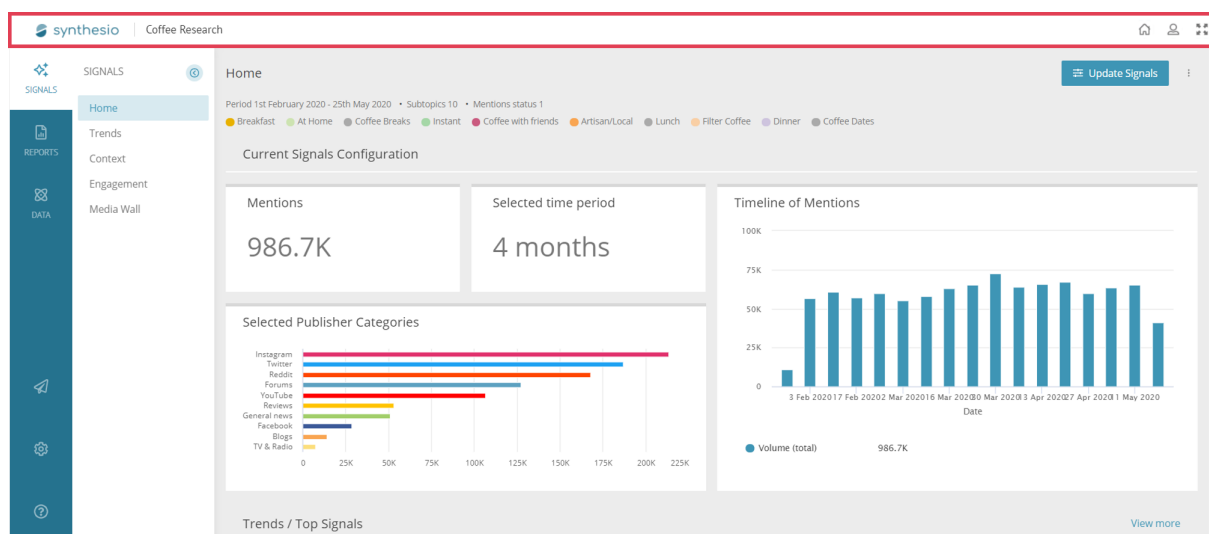

Hey there,

On September 2nd we've released a new way of navigating through your dashboard. Below you will find the main changes and innovations as well as some details on how you should proceed when browsing through the different sections of your dashboard.

Top Bar Has Been Removed

In the old navigation mode, there was a top bar with:

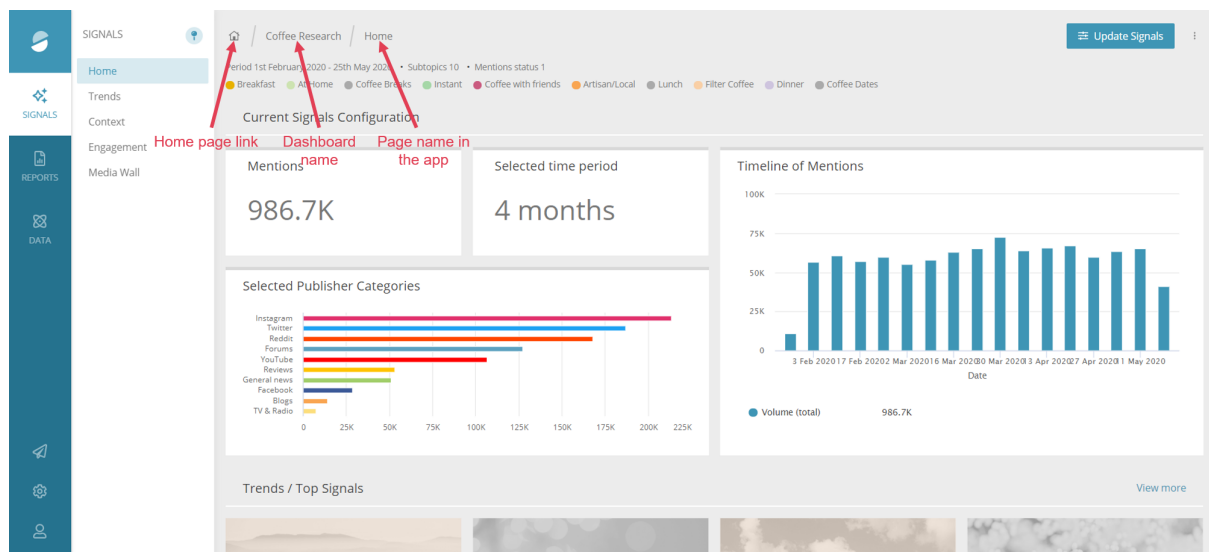

- Dashboard Name
- Button to go back to your workspace home page
- User profile details

In the new navigation mode, top bar has been removed and the information is now displayed differently.

On the top of each page you now have:

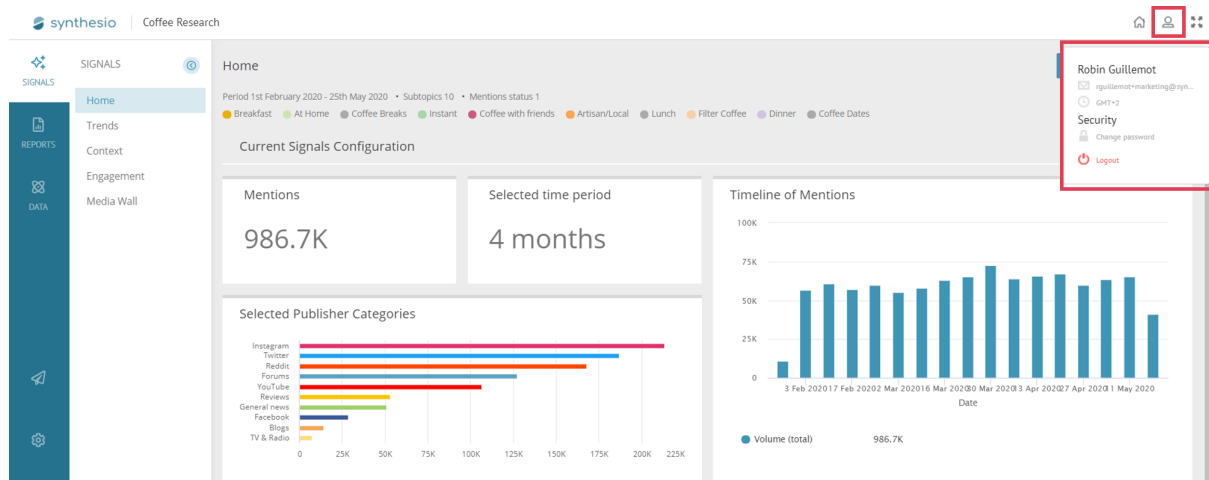

- A button to go back to your workspace homepage
- Name of your dashboard
- Page name in the app

User Profile Details

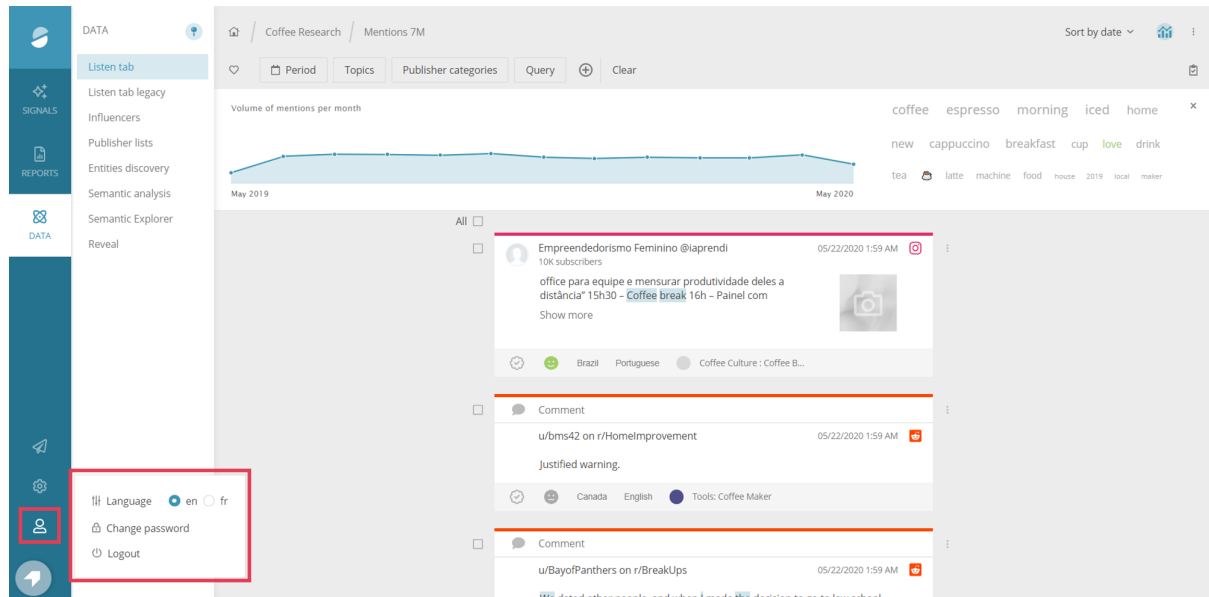

Whereas in the old navigation, user profile details were available in the top bar with the ability to:

- Change password
- Logout

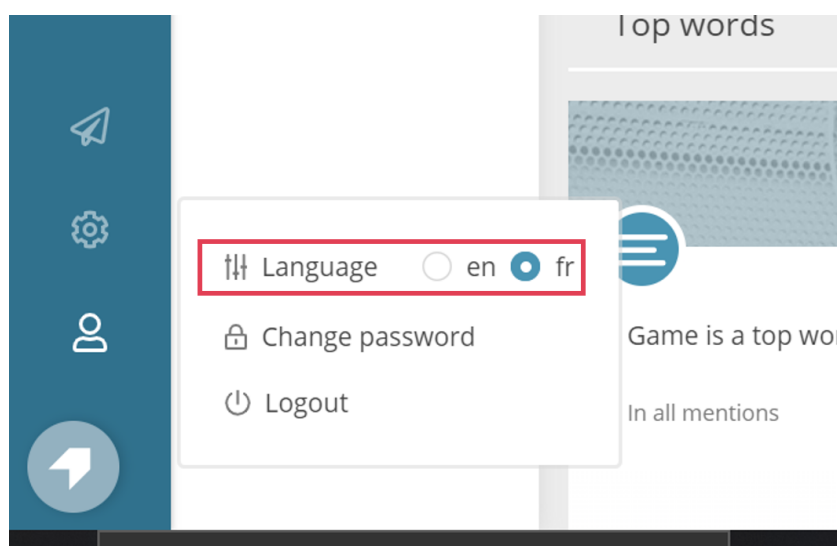

Within the new navigation mode, this is now available on bottom left of each page, below the Settings button, and you now have the possibility to:

- Change password
- Logout
- Change the language of the dashboard

Language Setting

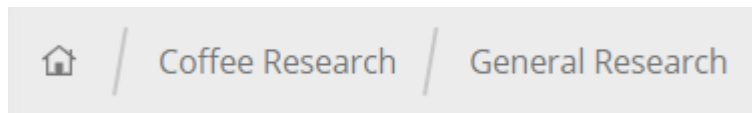

You can choose your Dashboard language between English and French.

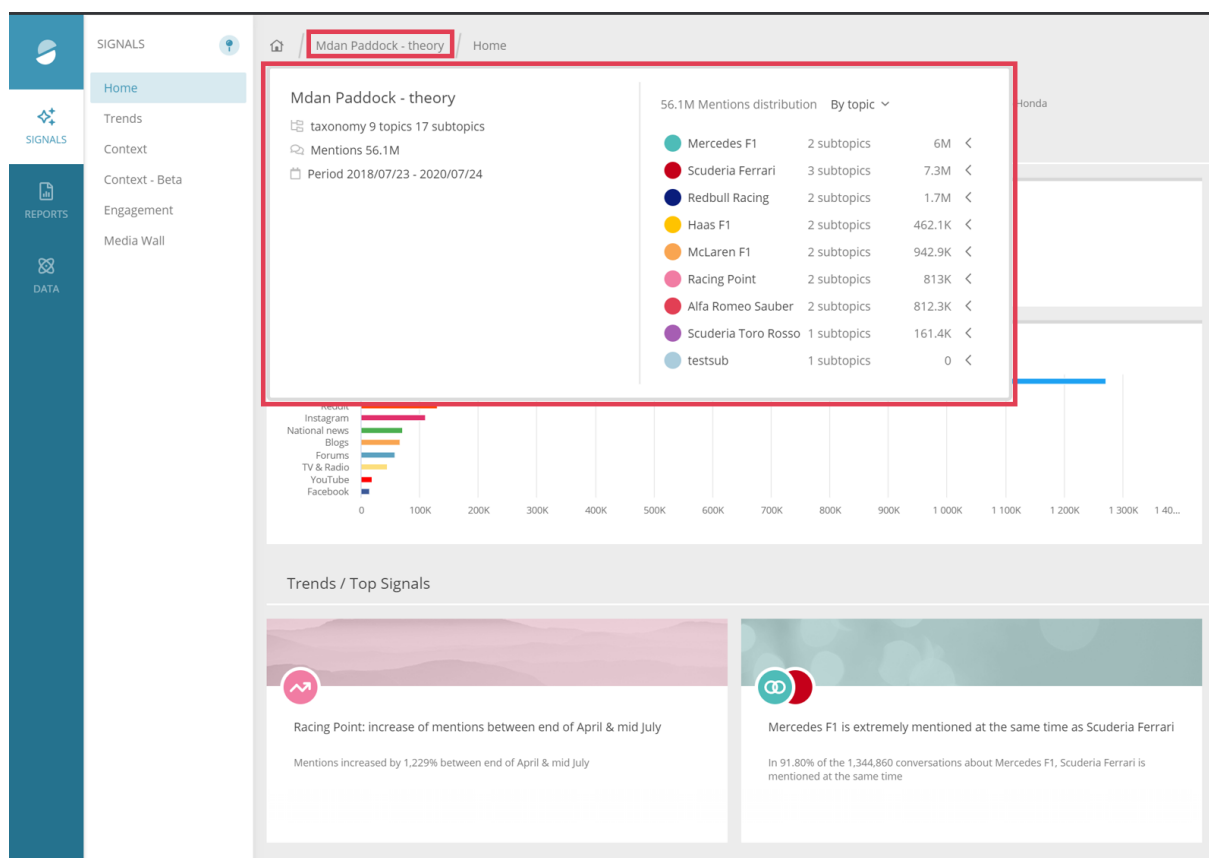

When you switch from one another, you need to refresh your page for the change to be applied on every page.

Breadcrumb And Dashboard ID Card

There is now a breadcrumb to inform you where you are in your dashboard all the time.

When you click on your Dashboard name, an ID card will be displayed.

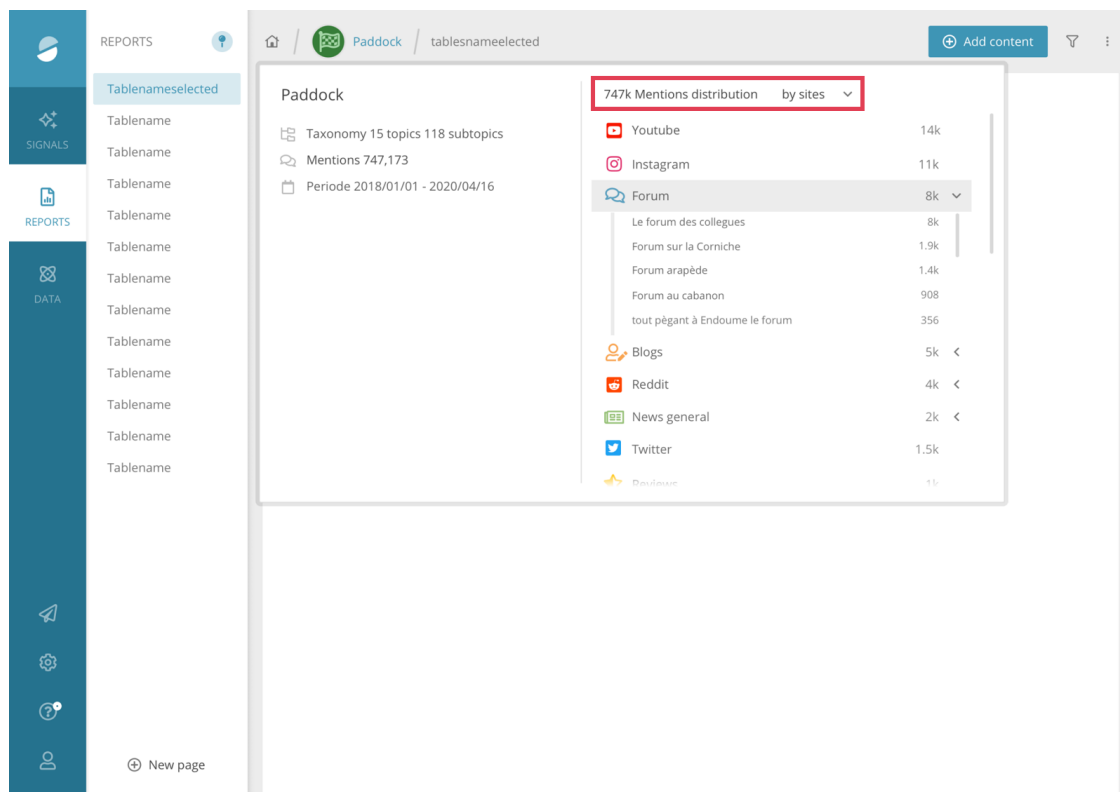

In the old navigation mode, you needed to go to the Listen Tab to access the taxonomy of your dashboard (topics structure, data sources...). This is now something available everywhere.

In this card is displayed:

- Number of topics/sub topics
- Number of mentions
- Period of the dashboard

- The list of the topic and sub topic with the number of mentions for each of them
- The list of data sources and the number of mentions for each of them
- If a Save & process is running, you will see a progress bar after the period

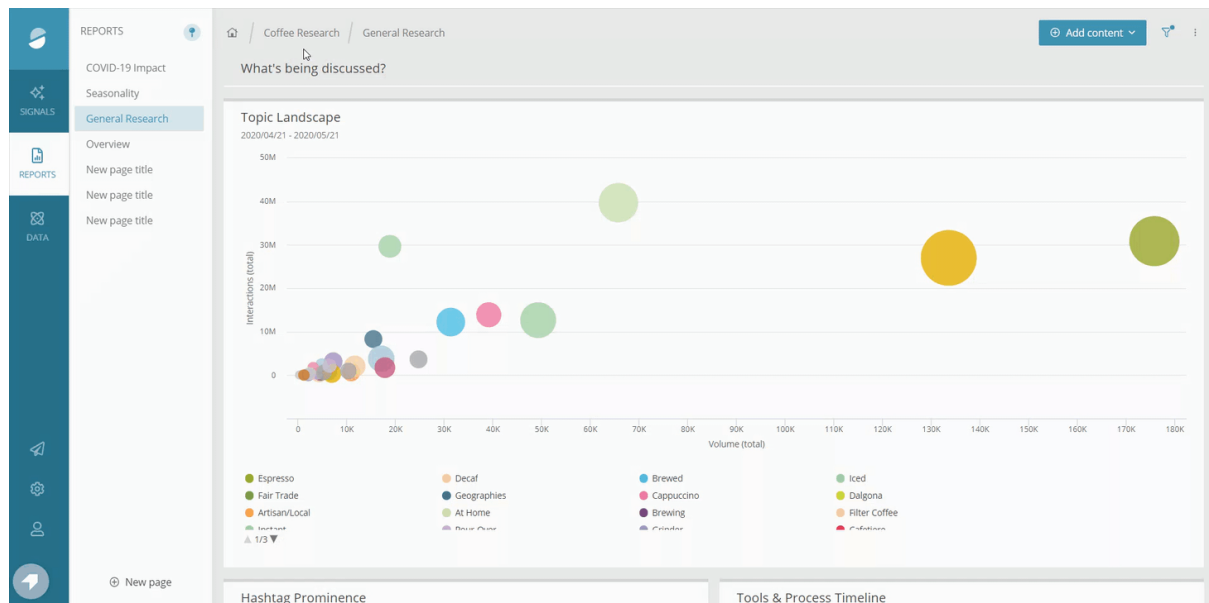

You default have your topics and subtopics displayed on the right of the ID Card. Should you want to access the data sources collected in your dashboard, click on the arrow right next to “Topics” and choose to display “by data sources”.

Pin Or Unpin Your Menu

In the old navigation, your menu was default displayed. As of now, should you want to display your data and visualizations on a bigger screen, you can choose to unpin your menu so that it is default hidden. It will be automatically displayed again when hovering your mouse on it.

You can of course also choose to pin your menu to let it be displayed all the time.

From single-URL system to multi-URL system

Until now, the URL of your dashboard was the same whatever the page your were on. From now on, you have a dedicated URL for each page of your dashboard.

What are the main advantages of a multi-URL system:

- You can directly access and share a specific location in your dashboard without going through the home page first
- You can use the “previous” function in your browser to go back to the previous page you were on
- When you reload a page, it will not redirect you to the home page

Sunsetting Old Features

Legacy Listen Tab And Reveal

The old listen and reveal is being replaced with “Listen - Beta” already available in the Data Section of your dashboard. Should you want more details about the new Listen Experience, [please check out this article](#).

Share dashboard / public dashbard link

With the new navigation system, the “Share Dashboard” feature is no longer available. But any link already generated is still working.

Legacy Human Review

The Human Review that was available under Settings has been removed. All Human Review features plus some innovation are now available directly from the Listen Tab. [Please check out this article](#) should you want more details about it.

Expired dashboard

Expired dashboards are no longer accessible.
